Data Engineer

Description

At WINNING CONSULTING we are looking for a **Data Engineer** profile to join our teams in a project for an important client in the Services Sector – *(Hybrid)*

REQUIREMENTS

- Solid skills with **Python for** ETL (especially PySpark)
- Experience working with **Snowflake** as a NoSQL data system
- Advanced working **SQL knowledge** and experience working with relational databases, query authoring (SQL) as well as working familiarity with a variety of databases and NoSQL database (Snowflake)
- Experience with **cloud environments**
- Experience building and optimizing 'big data' data pipelines
- Strong analytic skills related to working with unstructured datasets
- Experience supporting and working with cross-functional teams in a dynamic environment.
- **Fluent in English**

MAIN RESPONSABILITIES

For this role, a Data Engineer is focused on building the data backend, building processes supporting data transformation, data structures, metadata, dependency and workload management.

To achieve this, you need to:

- Implementing ETL processes for complete data integration, primarily focusing on Snowflake data
- Implementing data models for reporting and data analysis
- Building the infrastructure required for optimal extraction, transformation, and loading of data from a wide variety of data sources using AWS 'big data' technologies
- Working with data and analytics experts to design appropriate solutions for data analysis use cases.
