

Data Management Specialist, Scania Procurement

Description

Scania is now undergoing a transformation from being a supplier of trucks, buses and engines to a supplier of complete and sustainable transport solutions.

Are you passionate about driving data-related topics and transforming business processes?

Scania is on an exciting journey to implement a new System Landscape based on SAP, and we are looking for a dedicated Data Management Specialist to lead our Master Data initiatives for Sourcing & Procurement.

Responsibilities

As a Data Management Specialist, you will play a crucial role in our Business Transformation, ensuring that our Purchasing department reaches new heights.

You will be responsible for planning activities and coordinating a cross-functional team of solution architects, bridging the gap between business and IT functions.

- Lead master data initiatives within the purchasing domain.
- Ensure vendor data migrated into SAP is cleansed and validated for optimal data quality.
- Identify data owners, define business rules, and address data migration issues.
- Drive the implementation of data governance rules and maintenance processes within the purchasing domain.
- Develop and maintain data quality control procedures.
- Audit data regularly to ensure data integrity.
- Provide training and guidance to business users on master data management.
- Develop process improvements for data management activities.

You

To be successful, you need experience and have advanced knowledge in SAP S4 HANA (transactions, data model, business processes), preferably business partner & FI objects.

- Strong understanding of business processes and requirements from process streams and data management domains.
- Comprehensive understanding of data flow from an end-to-end business perspective.
- Experience in data quality management and master data management (especially data architecture & data governance).
- Experience working in both Business & IT functions.
- Strong business sense with an understanding of supplier and material data usage across the supply chain.
