

Data Engineer

Description

We are looking for a motivated **Data Engineer** with strong problem-solving skills and the willingness to work with a large group of people to join our team. This person will be responsible for supporting our business analytics team in building and maintaining the databases that power how we manage the business. Success in this role is highly dependent on the ability to manage tight deadlines, prioritize multiple tasks and achieve effective results in a high energy, fast-paced work environment.

Important note: Working with the US market may affect working hours and potentially working in a middle or second shift, according to the US time zone.

RESPONSIBILITIES

- Deliver solutions that are well-engineered, maintainable, and tested consistently and quickly
- Identify and understand issues, problems and opportunities as it relates to helping our business analytics team function at a granular level
- Observe system performance in your domain and identify emerging problems
- Quickly assess and resolve production incidents that arise in the components your team is responsible for
- Work with a variety of stakeholders across the business to incorporate varying requirements into a robust data system

BENEFITS:

- Private health insurance
- Sick leave 100% paid
- Canteen with free meals and drinks
- Flexible working hours
- Additional vacation days after two years in the company

We also provide up-to date equipment, entertainment facilities in a modern office right in the city center, company parties, yearly trip out of town, holiday presents and more.

Note: Flexible working hours and occasional work from home options in Better

Employment Type

Full-time

Beginning of employment

asap

Job Location

Nis, Beograd, Serbia

Working Hours

40

Base Salary

euro EUR 50K - 133K *

Date posted

June 4, 2024

Collective help us achieve proper work-life balance. We strongly believe in the magic of teamwork, though, so we come to the office at least once a week to keep the team spirits high.

APPLICATION DEADLINE

We look forward to hearing from you and accept applications until **25th of April**.

Please submit your CV and cover letter in PDF; only applications submitted in English will be considered.

Expected start date: as soon as possible.

Requirements

- Bachelor's degree in a Computer Science, Mathematics, or equivalent experience
- Strong analytical skills, ability to learn quickly, communicate and work collaboratively in a team environment
- Experience with extracting, transforming and loading ([ETL](#)) data, particularly from a variety of 3rd party APIs.
- Significant experience with Postgres, Airflow, Redshift, or strong SQL knowledge.
- Experience with scripting languages (Python preferred)
- Familiarity with AWS streaming services such as Kafka and Firehose.
- Experience building and maintaining infrastructure in AWS or similar cloud environments.
- Strong debugging/troubleshooting skills
- Familiarity with scraping tools and technologies
- Passionate about producing clean, maintainable, robust, well-tested code

How the process will look like

Your teammates will gather all requirements within our organization. Then, once priority has been discussed, you will decide as a team on the best solutions and architecture to meet these needs. In continuous increments and continuous communication between the team and stakeholders, you're part of making data play an even more important (and understood) part withing Brand New Day.
