AI Engineer – Remote Poland

Description

At First Advantage, people are at the heart of everything we do. This mindset spans from our customers and partners, to our greatest strength: our team members. Join us if you want to say "hello" to a rewarding career, and pave the way as an industry leader in mission-critical background screening solutions to some of the most recognized Fortune 100 and Global 500 brands.

Who We Are
We are on the frontline of the Great Onboarding, empowering organizations to Hire Smarter. Onboard Faster™. First Advantage (Nasdaq: FA) is an HR Tech company that delivers innovative solutions and insights to enable our clients to manage risk and hire the best talent. Leveraging an advanced global technology platform, First Advantage builds fully scalable, configurable screening programs that meet the unique needs of over 33,000 clients across the world. Headquartered in Atlanta, GA and with a globally distributed workforce spanning 28 locations with 5,500+ employees, First Advantage performs over 93 million screens in over 200 countries and territories annually.

Currently we are looking for AI Engineers with strong and hands-on experience in building AI applications, more specifically Generative AI to join our team in Poland

Responsibilities:

- Design, develop, and implement AI models for various applications including natural language processing (NLP), computer vision, speech recognition, and machine learning.
- Create effective prompts for AI models to generate accurate and relevant responses. This involves understanding the nuances of language and designing prompts that elicit desired behaviors from AI systems.
- Build scalable and robust API-based services that expose AI functionalities to internal and external stakeholders. These services should be well-documented, easy to use, and adhere to best practices in software engineering.
- OpenAI's platform and tools to enhance AI capabilities and improve model performance. Collaborate with OpenAI's APIs and services to integrate them seamlessly into our applications.
- Continuously optimize AI models and services for performance, scalability, and efficiency. Implement techniques such as pruning, quantization, and parallelization to enhance computational efficiency and reduce resource consumption.
- Develop comprehensive testing strategies to ensure the quality and reliability of AI models and services. Perform unit testing, integration testing, and validation testing to identify and address any issues or inconsistencies.
- Create documentation, tutorials, and guides to facilitate the usage of AI models and services by other team members and stakeholders. Share knowledge and best practices related to AI development within the organization.
- Stay updated on the latest advancements in AI research and technology. Explore new techniques, algorithms, and methodologies to enhance the capabilities of our AI systems and drive innovation.
- Work closely with cross-functional teams including software engineers, data
