

Data Engineer

Description

Runa is pioneering a first-of-its-kind payment rail capable of issuing, sending and accepting digital value at scale.

Banking and card payment infrastructure still struggles to serve low-volume, high-velocity payments both locally and globally. Businesses send over \$20 trillion in refunds, rewards, or remittances to consumers, employees, or freelancers, every year and waste thousands of hours, incurring costs of up to 50% per transaction and leaving the people they serve waiting days to receive their money.

Runa is transforming the payouts landscape with a new digital payments infrastructure that enables businesses to send digital value to anyone, anywhere instantly, free of charge for senders and recipients. Recipients can immediately spend the value they receive on the Runa network including 2000 plus merchants across 30 countries, completely independently of the legacy card rails. Hundreds of leading companies rely on Runa to power instant, flexible global payouts to tens of millions of consumers including Sodexo, TopCashback, Perkbox, Sweatcoin, Coinbase and Globetopper.

We are committed to providing a hiring and working experience in which all people feel they are equally respected and valued regardless of race, religion, national origin, gender, sexual orientation, age, marital status, veteran status, or disability status.

The Role

As a Data Engineer, you will be responsible for building and maintaining a reliable, efficient, event-driven data platform, and developing data models for use by Data Analysts and business users. Working closely with Engineering, you will define and ensure adherence to data contracts for Runa platform microservices to make sure we have a reliable flow of rich data, as we progressively migrate away from legacy Postgres source tables to events from the new Runa platform.
